

Day 1

Where Lifetime Performance
is Won or Lost

3rd Parity for a ROI

Loading

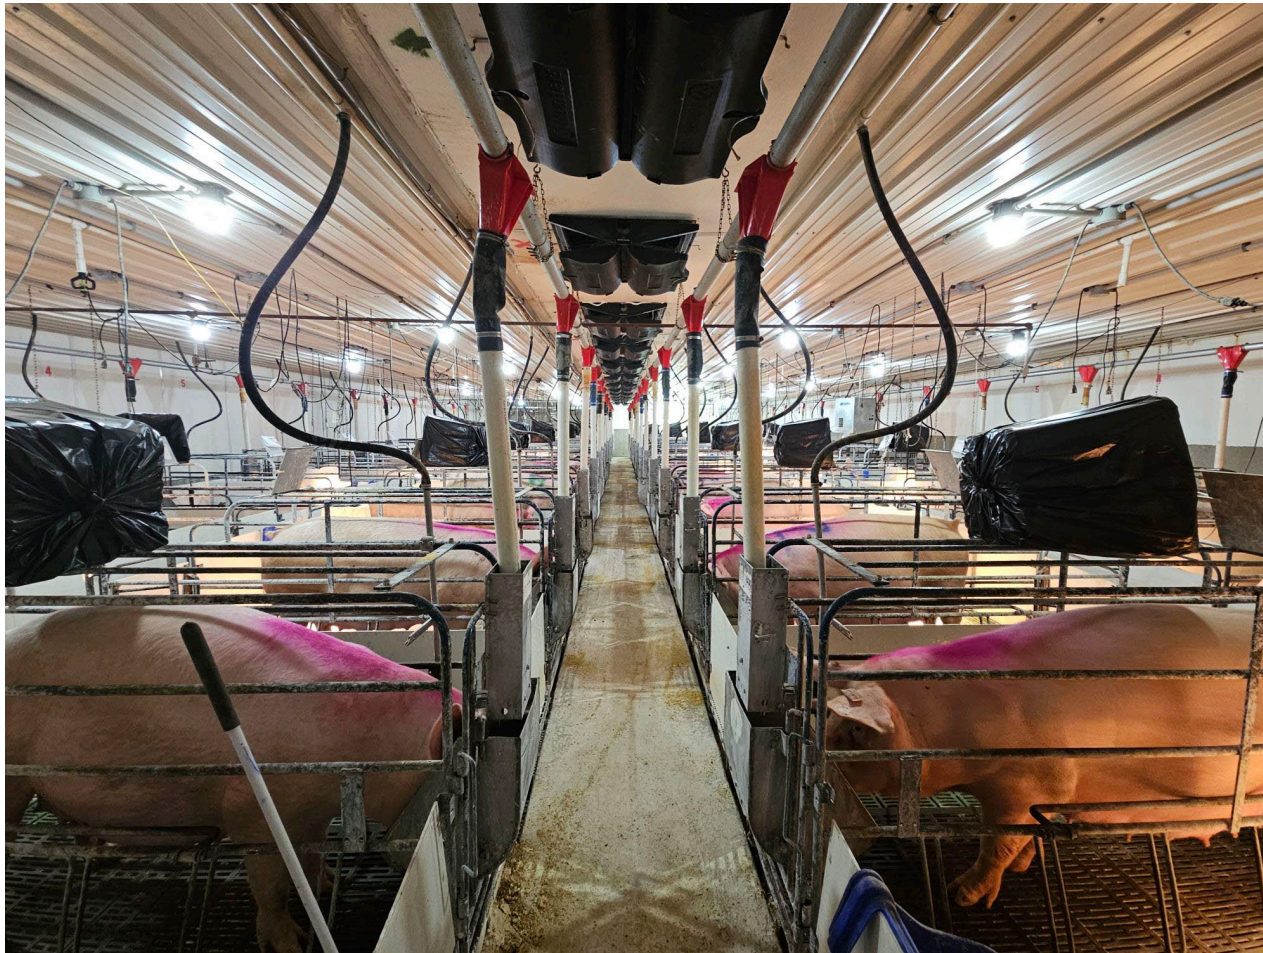

Watering

Identifying at
risk/temps/symptoms

Eating and drinking

Fostering

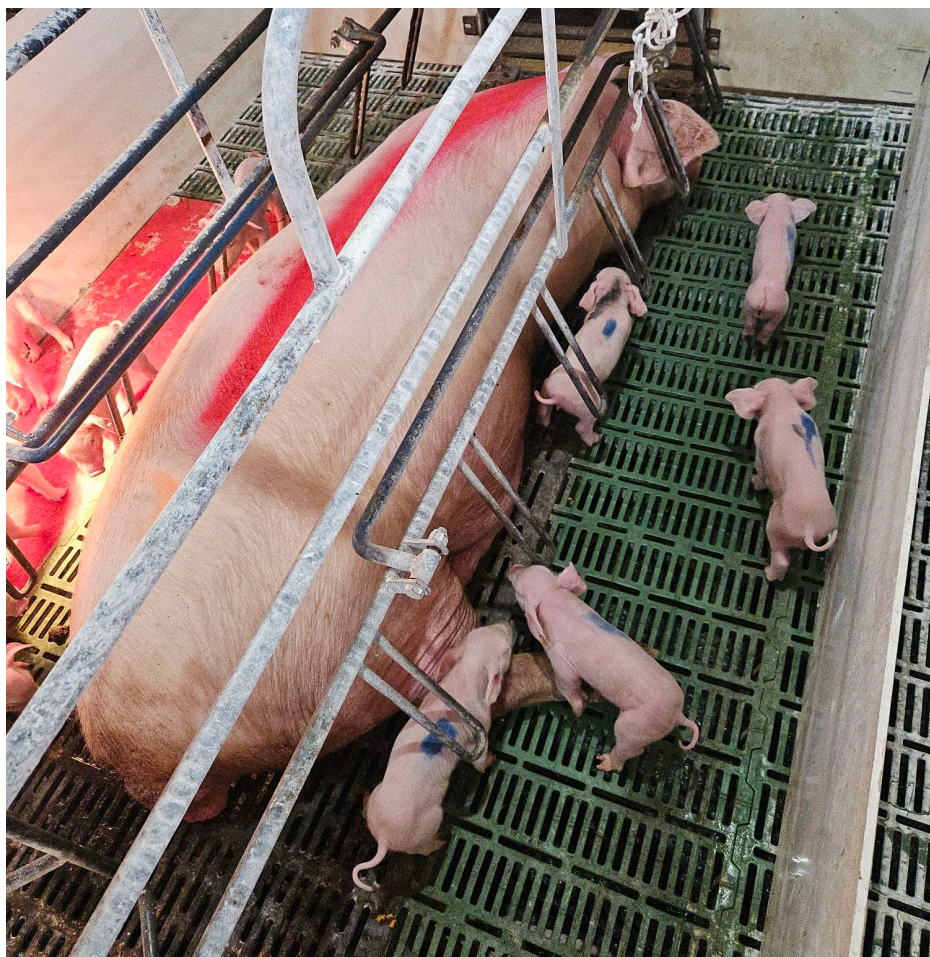

Line gilts up together-easy access

Taking temps w/in 24 hours of FW

Identifying at risk sow 12-24 hours post FW

Fever

Off feed

Dry
nose/dusty
water nipple

Head under
the feeder

Laying on belly

Red, hot,
swollen
underline

Pigs are falling
off, thin,
empty belly

How to take care of an at risk sow

Walk her

If she is a poor milker, give
.5 cc of oxy

Work with feed and water
to get her to eat/drink

Record whether she eats,
drinks,
urinates and defecates

At risk sows need to be
identified in the
first 24–48 hours and
walked sooner rather than
later

Walk in a calm manner at her pace. Take the long way.

Water/feed training

Fostering
